64-token chunk (FLA)

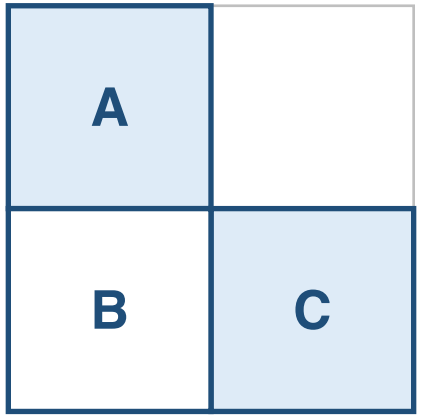

16-token sub-chunks
rescaled in log space

64×64 triangular inverse

g ≥ –5

16 tokens fit
in BF16 range

16-token chunk (FlashKDA)

I + L (16×16)

A, C: 8×8 blocks
FP32 forward
substitution

B: merged by two
BF16 HMMA GEMMs

off-diagonal block of the inverse = $-C^{-1} \cdot B \cdot A^{-1}$
